

vehicle hire manufacture aftersales retail

Acklea Ltd

experts in traffic management equipment

UTM Vehicle

Designed for Traffic Management in urban areas where it's compact dimensions and layout allows you to carry all the signs and cones that you need. It's also ideal for motorway work in the pre-layout.

Layout:

- ➔ Front compartment for sign A frames with coathanger system
- ➔ Middle compartment for cones and lights with opening gates to lay out cones
- ➔ Rear compartment for sign plates
- ➔ Rear safety beacons and mini lighting arrow for additional safety

Available with 6 x 2 vehicles with front wheel drive or standard 4 x 2 vehicles from 5 to 7.5 tonnes.

Designed and built by the people who use them

Acklea are one of the industry's leading traffic management vehicle hire and sales specialists. Our modern fleet of vehicles are the safest and most technologically advanced machines available in the market today.

The **Urban Traffic Management Vehicle** has been designed for maximum operator comfort. It is equipped with the latest in-cab technology with an emphasis on the safety of the driver and crew. Built by those with direct experience of working in live traffic and designed as a compact vehicle with the specific purpose of working towns, the **Urban Traffic Management Vehicle** is available for sale or hire.

There are two options for the rear of the vehicle: either a VSA board and standard four-way lighting system, or alternatively easily changeable wicket boards with lane closure boards which can be fitted from ground level. This is a much safer option as there is no climbing required by the operator.

The **Urban Traffic Management Vehicle** is available for short term, long term or contract hire for total flexibility. With our regular servicing and maintenance schedule of our complete hire fleet you can be assured of total performance and reliability from your hired vehicle. A service support technician is available to respond promptly to unforeseen problems.

For those customers who prefer to purchase rather than hire a **Urban Traffic Management Vehicle**, each machine is built to order and tailor-made to the customer's exact specification in **Acklea's** fully equipped workshops. If required, **Acklea** can maintain and service your **Urban Traffic Management Vehicle** and a

mobile service technician is available to respond promptly to a call out. **Acklea** aim to provide the highest quality equipment backed up by a first class support service - *it's a service you can rely on.*

Full cab control ensures the operator's safety, avoiding the need to get out of the vehicle into live traffic to adjust the sign board (depending on board or lighting options).
